

AI training that fits Zambian reality

We teach teams to use AI on work they already do. No theory. We work on your files, at your office, and you leave with something that runs the next day.

WHO IT IS FOR

Any business that handles mobile money, WhatsApp and ZRA paperwork every week. Small teams and larger teams. Also students and individuals who want to practice building real GenAI apps from scratch, not just chatbot demos.

We keep data in Zambia. Sensitive data stays on local servers to meet Data Protection Act 2021 section 70.

HOW IT RUNS

Introduction K3,500: half day, up to 15 staff, two or three tasks your team does weekly.

With follow-up K5,000: same half day plus four weeks help on WhatsApp, weekly prompt check, Champions certificate.

Discovery K10,000: up to 8 staff, four hours, one automation built live before we leave, two week support.

Implementation K40,000: 15 staff, three automations, shared WhatsApp inbox and CRM.

Growth K75,000: 25 staff, five automations, digital signatures and priority support.

Individual and student practice K850: full engineering lifecycle from problem design to deployment, portfolio ready.

Retainer K12k to K25k per month: ongoing support, new automations, monthly review.

WHAT YOU GET

Cleaned example of your own sheet, templates to keep, one automation that works, short plan for next steps, ROI note, certificate. For students, a repo you can show employers.

HOW TO BOOK

Pick a date on WhatsApp. 50% MoMo to lock it, 50% morning of training. We bring UPS and Starlink backup. Proforma and ZRA e-invoice included.
